Are you Compliant?

If your business accepts...
Credit Cards, Mobile Payments, Online Payments
then you NEED to be compliant!

Do you meet 3.1?

- Have you created a security policy that meets compliance?
- Do you scan for vulnerabilities?
- Do you conduct application layer penetration testing?
- Do you review all code changes before production?
- Have you implemented change control procedures?
- Do you identify, prioritize and address newly discovered and common security vulnerabilities?
- Have you incorporated information security in the SDLC?
- Do you maintain secure environments?
- Do you train developers to code more secure apps?

24% of organizations have experienced a data breach. Of all the organizations breached in the last 10 years, NOT ONE had been found compliant at the time of breach!

The average cost of a data breach is $3.8M. 69% of consumers would be less likely to engage with a business that has been breached.

The average time a compliant driven vulnerability stays open is 352 DAYS.

How do you become compliant?

- Implement secure environments
- Incorporate information security in the development process
- Identify, prioritize and address newly discovered and common security vulnerabilities
- Implement change control procedures
- Review code before production
- Scan for vulnerabilities and conduct application layer penetration testing
- Create a compliant security policy
- Train developers to code more secure apps
