

Top 7 reasons why organizations choose WhiteHat Security

We combine technology and human expert intelligence to protect your applications

1

WhiteHat brings you **15 years** of application security leadership.

With over a decade of intelligence metrics and the expertise of our security engineers, we are able to deliver a unique perspective and thought leadership in the application security space.

2

WhiteHat provides unparalleled **accuracy**.

By employing human-augmented review of results, we identify where you are vulnerable with near zero false positives, allowing your teams to save time and focus on more critical business objectives.

3

WhiteHat is **easy to use**.

Scans do not have to be requested for each release, nor do you have to fill out a lengthy form for the initial assessment.

4

WhiteHat can **reduce your OpEx costs**.

With unlimited access to security experts, your developers get the support and analysis needed to understand security vulnerabilities, severity and threat levels, and streamline remediation.

5

WhiteHat is **easy to incorporate** into your environment.

Easy to configure, without the need for costly professional services or lengthy configuration exercises, our products integrate into you existing infrastructure seamlessly.

6

WhiteHat Sentinel Source **protects your Intellectual Property**.

There's no need to upload binary code and subject it to reverse-engineering - we test your source code within your own environment.

7

WhiteHat Sentinel Dynamic **matches your development work style**.

We provide continuous and concurrent assessments, which is essential given the frequency of web application changes and the emergence of new threats.
