

WhiteHat Quick Start

Speedy Implementation of your WhiteHat Services

A quick start to your application security adoption is a good key to success, and helps speed the return on your investment. Customers who fully deploy their scanning services see improvements in their WhiteHat Security Index scores by 20-25% year over year, with a decreased time to deployment. Most importantly, our Quick Start program ensures that your AppSec initiative enjoys rapid deployment to help meet strategic goals and outcomes.

QUICK START METHODOLOGY

The WhiteHat Quick Start service is designed to ensure a speedy application security onboarding within your organization. The dedicated Quick Start engineer works with your organization's technical contacts, from DevOps to IT, to help onboard your application security assets onto our platform, managing the engagement from initiation to steady state.

On a tactical level, the Quick Start engineers assist from date of contract through steady state. From the discovery scans through production, the Quick Start engineer will coordinate a review with the Threat Research Center verification engineer to explain scan results with stakeholders. Our quick start service connects you with highly experienced AppSec engineers with a deep familiarity of the Sentinel Platform and application security best practices.

HIGHLIGHTS

Kickoff meeting with summary of services for stakeholders, in support of WhiteHat Sentinel Dynamic or Static testing.

Sentinel application security platform introduction and training for all stakeholders and intended users.

Identification of IT/Network rules, credentials, and other scanning information needed for configuration.

Available for SAST or DAST implementation
